

Columbia operates an FAA Approved Repair Station in Aurora Oregon, with extensive capabilities capable of providing maintenance services to support a variety of customer needs.

Blades

Our fleet of helicopters operate at a very high tempo with rotor blades averaging 2,400 flight hours per year. Columbia's blade shop provides composite blade repair services based on their years of experience maintaining rotor blades flown in demanding conditions at high operational tempo rates. The experience provided by our technicians is unmatched and not available from any other service provider. After completing any repair or overhaul, our technicians balance the blade using a state of the art Avion balancer which allows us to return blades to customers requiring little or no flight tracking adjustments.

Hydraulics

Our hydraulic shop maintains a wide range of capabilities providing repair, or overhaul service for hydraulic components used in different aircraft. With more than four decades of flying experience, our technicians are skilled at troubleshooting hydraulic parts and getting your aircraft back in the air as quickly as possible.
